Appendix A - Figures and Plans and Table
Appendix B - Staff contact details
Appendix C - Hazards and Risks
Definitions

- **Capral**: Capral Limited – the Licence Holder
- **CCO**: Chemical Control Order
- **CEM**: Crane Enfield Metals – Capral’s landlord
- **EIA**: Environmental Impact Assessment
- **EPL**: Environmental Protection Licence
- **Emergency**: Any event that arises internally or from external sources, which may adversely affect persons or the community generally and which requires immediate response. Emergency procedures are designed to ensure the safety of occupants in the event of an emergency.
- **Immediately**: Promptly and without delay
- **INS**: Incident Notification System
- **Material harm**: (a) harm to the environment is material if:
  (i) it involves actual or potential harm to the health or safety of human beings or to ecosystems that is not trivial, or
  (ii) it results in actual or potential loss or property damage of an amount, or amounts in aggregate, exceeding $10,000 (or such other amount as is prescribed by the regulations), and
  (b) loss includes the reasonable costs and expenses that would be incurred in taking all reasonable and practicable measures to prevent, mitigate or make good harm to the environment.
  It does not matter that harm to the environment is caused only in the premises where the pollution incident occurs.
- **PIRMP**: Pollution Incident Response Management Plan
- **POEO Act**: *Protection of the Environment Operations (POEO) Act 1997*
- **Pollution Incident**: An incident or set of circumstances during or as a consequence of which there is or is likely to be a leak, spill, or other escape or deposit of a substance, as a result of which pollution has occurred, is occurring or is likely to occur.
  It includes an incident or set of circumstances in which a substance has been placed or disposed of on premises, but does not include an incident or set of circumstances involving only the emission of any noise.
  *(Protection of the Environment Operations (POEO) Act 1997)*
- **Primary Containment**: Passive systems such as spill oil tanks designed to capture and contain large amounts of oil lost from major oil filled equipment. The principle of operation of these systems is to contain the oil for timely removal and disposal. Examples of primary containment are sealed transformer bunds, and transformer bunds draining to spill oil tanks with underflow discharge.
- **Secondary Treatment**: Passive or active systems designed to treat contaminated discharge from Primary Containment and/or switchyard drainage systems. The principle of operation of these systems is to separate oil from any discharge. Examples of Secondary Treatment systems are retention dams with underflow discharge, or a coalescing plate oil/water separator tank.
- **Spill Oil Tank**: A concrete tank equipped with an inflow baffle and an underflow outlet that relies upon gravity to separate oil designed. More advanced oil separation systems may also be installed to minimise discharge of oil contaminated water. The separation system is to be low maintenance.
REFERENCE DOCUMENTS

- Emergency Plan – Capral Penrith
- Site and Building Services Drawing Reference A1376 Rev P
- Matthew Freeburn drawing plan showing spot levels and contours, Ref 23031.

1. **INTRODUCTION**

New requirements under the Protection of the Environment Legislation Amendment Act 2011 require Environment Protection Licence holders to prepare, keep, test and implement a Pollution Incident Response Management Plan for the licensed activities in accordance with requirements set out in Part 5.7A of the POEO Act.

1.1 **SITE INFORMATION**

Capral Limited (Capral) holds a premises based Environment Protection Licence (EPL 12405) covering the scheduled activity of Metallurgical activities.

The Capral facility is located at 2115 Castlereagh Road, Penrith, NSW. The Site is leased from Crane Enfield Metals (CEM) for the production of Aluminium Extrusion. CEM operate a Copper Tube factory on the southern portion of the Site. Refer to Appendix A for a locality map for this site, including immediate neighbours.

The Site is occupied by a number of large manufacturing buildings and offices. Areas surrounding the buildings are predominately hardstand concrete and bitumen paved surfaces. The south-eastern section of the Site and surrounding the buildings are mainly hardstand areas, while the northern section of the site and the area at the front of Castlereagh Road are unsealed grassed or landscaped areas.

The site is relatively flat with surface water drainage towards a marshy area to the north-east of the site.

The site is located in a commercial and industrial area. Surrounding land uses include:

- North: vacant land. Land currently in preparation for future industrial/building construction (commenced in April 2017);
- South: a large area of vacant land;
- East: vacant land and residences beyond this to the east, and the Penrith Sewage Treatment Plant to the South-east; and
- West: commercial and industrial properties separated by Castlereagh Road, and beyond this is a narrow section of public recreational land adjacent to the Nepean River.

1.2 **OBJECTIVE**

The Purpose of this PIRMP is to:

- Outline how the risk of a pollution incident will be minimised and controlled through the identification of risks and the development of planned actions to minimise and manage those risks; and
- Document the notification protocol to ensure comprehensive and timely communication about a pollution incident is provided to relevant stakeholders.

1.3 **SCOPE**

This PIRMP has been prepared in accordance with:

- Part 5.7A of the POEO Act 1997;
- Part 3A of the POEO (General) Regulation 2009; and

This Pollution Incident Response Management Plan (PIRMP) applies to all persons on-site at Capral Limited, Penrith, inclusive of contractors and visitors.
2. **MAJOR HAZARDS**

The potential major hazards which have been identified for the Capral Site include:

- Liquid pollutant spills (e.g. hazardous chemicals, etc) resulting in land contamination or water contamination;
- Fire;
- Flooding

The likelihood of environmental hazards occurring at the Capral site has been captured through the Hazard and Risk Assessment prepared by the Chief Warden and Safety Coordinator (Refer to Appendix C). The purpose of this exercise was to identify significant environment and community aspects and impacts across the site, the risk they pose to operations and the controls necessary to effectively manage them.

The specific risk management plans/ protocols for fire emergencies, spill events previously developed and currently in place are presented in Sections 6 – 9 of this Plan.

3. **NOTIFICATION PROCEDURES**

3.1 **DETERMINATION OF MATERIAL HARM**

Following containment of the incident, immediate action must be taken to determine if the incident can be classified as a ‘material harm incident’, i.e. considered to be causing or threatening material harm. As defined by Section 147 of the POEO Act, a material harm incident has occurred if the incident:

- involves actual or potential harm to the health or safety of human beings or to ecosystems that is not trivial; or
- results in actual or potential loss (including all reasonable costs and expenses that would be incurred in taking all reasonable and practicable measures to prevent, mitigate or make good harm to the environment) or property damage of an amount, or amounts in aggregate, exceeding $10,000 (or such other amount as is prescribed by the regulations).

The determination of a material harm incident will be made by the Capral Chief Warden / Safety Coordinator in consultation with the Operations Manager. If the Operations Manager is not available immediately, the determination will be made by the Capral Chief Warden / Safety Coordinator.

3.2 **INTERNAL AND EXTERNAL NOTIFICATION**

Notification of an environmental incident is the responsibility of all site and contractor personnel. In the event of an incident, response and notification must be undertaken as per Section 4, which contains the following important information:

- the persons and authorities to be notified by Part 5.7 of the POEO Act; and
- the contact details of each relevant authority referred to in section 148 of the POEO Act, refer to Table 4.2.
- the agencies must be contacted in the order outlined below:

<table>
<thead>
<tr>
<th>PIRMP Notification Requirements</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>
4. POLLUTION EMERGENCY PROCEDURE

4.1 ROLES & RESPONSIBILITIES
In the event of any pollution incident, all Capral staff have a responsibility to raise the alarm and to immediately notify Capral Chief Warden / Safety Coordinator. ‘Immediately’ is taken to mean ‘promptly and without delay’. As per guidance provided by the EPA, the decision on whether to notify the incident in accordance with Part 5.7 of the POEO Act should not delay immediate actions to provide the safety of people or contain a pollution incident. However, incident notification will be made as soon as it is safe to do so.

Currently, personnel roles described within this plan are as follows:
- Chief Warden – whose role is the “Emergency Controller”
- Chief warden is supported by Deputy Wardens on shift; and
- Area Managers – particular team leader or supervisor in any specific plant area.

Relevant contacts are listed in Table 4-2 below. Further contact details are presented in Appendix B.

4.2 EMERGENCY CONTROL CENTRE
The Emergency Control Centre will be based at the Gatehouse. The Emergency Controller will be based at this location in the event of an environmental emergency and shall co-ordinate requirements & resources from this location.

4.3 EMERGENCY STATIONS AND ASSEMBLY AREAS
Designated Emergency Stations identified to all staff are to be used in the event of an emergency event, inclusive of any pollution incident.

The location of these, their associated evacuation assembly point and instructions on their use are indicated in the Emergency Plan – Capral Penrith.

4.4 EVACUATION PROCEDURE
Where a potential evacuation situation arises, all personnel shall follow the evacuation procedures as outlined in the Emergency Plan – Capral Penrith.

4.5 EMERGENCY INFORMATION
Emergency Controller ensures that relevant site documents (for example centralised MSDS information, copies of stormwater system network) are available at a central location –the Gatehouse and accessible to the Emergency Plan – Capral Penrith.

4.6 ACTIONS TO BE TAKEN DURING OR IMMEDIATELY AFTER A POLLUTION INCIDENT
The following procedure in line with Capral’s existing Emergency Procedure would be followed in the event of a pollution incident occurring at the Site:
Any member of Staff

Chief Warden is to attend the indicated Emergency Station, make contact with local Area Wardens and Deputy Wardens, and Assess the situation

If the initial assessment of the incident indicates a level of potential material harm, the Chief Warden must notify the following authorities:

Any staff member can activate the Occupant Warning System in accordance with existing Emergency Plan – Capral Penrith.

If Chief Warden cannot be contacted, deputy wardens are required to notify each relevant authority.

A pollution incident is required to be notified if there is a risk of ‘material harm to the environment’ meaning:
1) it involves actual or potential harm to the health or safety of human beings or to ecosystems that is not trivial; or
2) it results in actual or potential aggregate losses in exceedence of $10K.

Relevant Authorities/Stakeholders
1. EPA – 131 555
2. NSW Ministry of Health, Parramatta Office – 9849 3603
3. WorkCover – 1310 50
4. Penrith City Council – 02 4732 7777
5. Neighbouring Residents

Record Incident in Incident Database
(person becoming aware of incident or team leader – additional information to be added as it becomes available)
Who was notified (organisation)
Who they notified (name and position)
How they were notified (phone/email); and
Time they were notified
In the process of notifying the relevant authorities the following information must be communicated to each authority in accordance with the POEO Regulation 2012 (C 148) during pollution incidents causing or threatening material harm:

1. the time, date, nature, duration and location of the incident,
2. the location of the place where pollution is occurring or is likely to occur,
3. the nature, the estimated quantity or volume and the concentration of any pollutants involved, if known,
4. the circumstances in which the incident occurred (including the cause of the incident, if known),
5. the action taken or proposed to be taken to deal with the incident and any resulting pollution or threatened pollution, if known,
6. other information prescribed by the regulations

The information required to be reported is only that information known to the person notifying the incident when the notification is given. If any of the above information is not known during initial notification but becomes known afterwards, that information must also be notified to the relevant authorities.

After initial notification of any material harm incident, it will be the responsibility of the Chief Warden / Safety Coordinator to liaise with any authority listed in Table 4-2 that requests additional information, or is providing directions for management of the material harm incident. This may include incident investigation reports and ongoing environmental monitoring results.

Table 4-1 summarises the 24 hour contact details for parties responsible for managing incident response and notifying the relevant authorities.

### 4.7 NOTIFICATION TO LOCAL LANDHOLDERS AND COMMUNITY

Community notification shall be undertaken at the determination of the Chief Warden / Safety Coordinator. Names and contact details of stakeholders, including local residents are included in the Cranes Stakeholder Location Plan (Figure 2 in Appendix A).

The following notification methodology is proposed to be utilised as required:

- **early warnings**: same day telephone notification or door knocking to landholders whom may be affected by the incident over the subsequent 24 hour period; and
- **updates**: follow up phone calls to all landholders whom may have been notified by the initial early warning.

Information provided to the community will be relevant to the incident and may include the following details:

- type of incident that has occurred;
- potential impacts local landholders and the community;
- site contact details; and
- advice or recommendations based on the incident type and scale.
5. INVENTORY OF POLLUTANTS ON SITE

Refer to Figure 3 in Appendix A for dangerous goods storage locations. Table 1 in Appendix A provides an inventory of notifiable quantities of Dangerous Goods stored at the Facility.

In addition to the chemicals on site included within the Capral’s Dangerous Goods Licence, there are a number of other potential substances on site which may become pollutants in the event of unforeseen or emergency circumstances such as a spill, loss of containment, plant malfunction, overflow event etc.

Table 5-1 Potential Pollutants on site

<table>
<thead>
<tr>
<th>Potential pollutant</th>
<th>Location</th>
<th>Estimated Maximum Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stored Hydraulic Oil</td>
<td>Various storage locations within areas of operation</td>
<td>Estimated quantity 800L across site at any time</td>
</tr>
<tr>
<td>Stored production wastes including;</td>
<td></td>
<td>Variable quantity on site at different times. Approximately 42 tonnes generated and disposed of per year</td>
</tr>
<tr>
<td>- Mixed used oily waters</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Stored Liquid Caustic</td>
<td>Stored of in a purpose built holding tank</td>
<td>Variable quantity on site at different times. Approximately 55 t disposed of per year</td>
</tr>
<tr>
<td>Storm water</td>
<td>Stormwater from across the Site (or potentially beyond) could transport contaminants directly into the environment and watercourses.</td>
<td>Volume of water would be determined by rainfall and therefore surface water flow. Quantity and composition of pollutants would depend upon the areas across which surface water flow would flow.</td>
</tr>
<tr>
<td>- In the event of a failure of the ‘first flush’ system</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- In the event that oily water separators malfunction / overflow</td>
<td>Contaminated process water could potentially be released to the environment via the irrigation system</td>
<td>Volume would be determined by volume of rainfall and water level within the treatment plant at the time.</td>
</tr>
</tbody>
</table>
Figure 5-2 shows a generalised schematic of the likely direction of flow of surface water potentially containing pollutants. This generalised figure is based on analysis of Site and Building Services Drawing Reference A1376 Rev P (Appendix A Figure 5) for the locations of stormwater drains and Matthew Freeburn drawing plan showing spot levels and contours, Ref 23031.

Figure 5-2 Likely direction of flow of surface water flow
6. ENVIRONMENTAL INCIDENT PROCEDURE – FIRE

For response to a fire which may cause an environmental incident, refer to existing Emergency Plan Capral Penrith and the Dangerous Goods/Hazardous Spill or Leak Emergency procedure within this plan.
7. ENVIRONMENTAL INCIDENT PROCEDURE – LIQUID POLLUTANT

SPILL to stormwater or Ground/groundwater

- Incident
  - Stop source of spill immediately if possible
  - Contact Supervisor or Area Manager
    - WEAR PPE
      - Attempt to contain spill in localised area if safe to do
    - Activate stormwater containment at drain, and/or at treatment plant in the areas where spill has occurred
    - Raise incident report after clean up
      - Gatehouse to contact Area Manager & Emergency Controller
      - If spill flows over unsealed surface, contain and absorb spill using spill kit equipment for particular contaminant
      - Follow Emergency Plan - Capral Penrith

IF YOU CANNOT CONTAIN THE SPILL OR IT COULD OR HAS ENTERED STORMWATER NETWORK, CALL THE EMERGENCY EXTENSION (WEIGHBRIDGE) – ‘430’
8. ENVIRONMENTAL INCIDENT PROCEDURE - FLOODING

In the event of flooding from any pipe containing water, an environmental risk exists in the management of flood waters. The immediate action to be taken is:

<table>
<thead>
<tr>
<th>STEP</th>
<th>ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Do not endanger personal safety. Switch off machines if possible, to prevent water damage.</td>
</tr>
<tr>
<td>2.</td>
<td>Evacuate all personnel from the impacted area.</td>
</tr>
<tr>
<td>3.</td>
<td>Close valves on the piping system, shut off any pumps etc.</td>
</tr>
<tr>
<td>4.</td>
<td>Switch off power mains to affected area.</td>
</tr>
<tr>
<td>5.</td>
<td>Follow the Emergency Plan - Capral Penrith if the water comes in contact with any contaminants</td>
</tr>
<tr>
<td>6.</td>
<td>Catch or divert water with plastic, salvage sheets, boards, and rubbish bins.</td>
</tr>
<tr>
<td>7.</td>
<td>Return to normal conditions as soon as possible.</td>
</tr>
</tbody>
</table>
9. ENVIRONMENTAL INCIDENT PROCEDURE – AIR POLLUTANT

Incident (eg. alarm at obscuration meter or after-burner, smoke from fire)

Are toxic fumes/smoke being generated

Stop cause of generation

YES

Contact Emergency Area warden or activate the emergency warning system Weighbridge on 430)

Follow Emergency Plan – Capral Penrith

Evacuate all personnel from the affected area, DO NOT endanger personal safety
Ensure appropriate PPE is worn if area is entered

Manager to notify the EPA according to the Communications Procedure if the fumes/ smoke contravene licence conditions

End

NO

Contact Supervisor/Manager

If risk to stormwater follow Environmental Incident Procedure – Liquid Pollutant

Contact Area Manager and/or Chief Warden

Rectify cause of incident

Complete Incident report
10. TRAINING, TESTING AND COMMUNICATION

10.1 TRAINING

All personnel affected by the content of this document will receive instruction or explanation on the relevant parts of the document. This training will be communicated at staff meetings and at toolbox meetings.

Incident management and emergency response shall be included in all emergency procedure training and site inductions. A training exercise designed to test the adequacy of emergency preparedness and response will be undertaken at least once each year incorporated with the existing Emergency Response Training scheduled for the site.

Training exercises may involve the emergency response team responding to a simulated emergency, but may also include expanded simulations that involve other (or all) site personnel, the Emergency Management Team, Incident Management Team and external response agencies (Ambulance, Fire etc). All training records, including the name of the person undertaking training and date of training, shall be maintained in personal training record files and updated in the training matrix.

10.2 TESTING, REVIEW AND MAINTENANCE

The testing of the PIRMP will be undertaken to check that the information is accurate and current and that the plan is capable of being implemented in a workable and effective manner. Testing shall be undertaken in the following ways:

- the PIRMP will be tested by assessing and reviewing it and making any necessary changes as identified. Testing is taken to be either a desktop review or an environmental emergency drill procedure. Testing will include all components of the plan, including training requirements;
- a review of the PIRMP will occur every 12 months commencing from the date of authorisation by the Operations Manager. Contact details in this document must be kept current at all times; and
- the PIRMP will be reviewed within one month from the date of any pollution incident that occurs in the course of an activity to which the EPL relates. This review will be undertaken in light of the incident, to provide the information included in the plan is accurate and up to date and the plan is still capable of being implemented in a workable and effective manner.

Information to be retained regarding PIRMP testing includes:

- the manner in which the test was undertaken;
- dates when the plan has been tested;
- the person who carried out the testing; and
- the date and description of any update of or amendment to the plan.

This information will be included in Section 10.4 of this report.

10.3 AVAILABILITY OF THE PIRMP

The PIRMP shall be kept in written form at the EPL premises and shall be made available to all personnel responsible for implementing the plan, and to an authorised officer (as defined in the POEO Act) on request.

The PIRMP will be made publicly available via the Capral website www.capral.com.au

No personal information (within the meaning of the Privacy and Personal Information Protection Act 1998) or security sensitive site information will be made publicly available as part of the PIRMP. As such, the Appendices of this plan will not be available on the website.
