

The background features a low-angle shot of palm trees against a bright sky, with their fronds bent by a strong wind. A semi-transparent teal gradient covers the right side of the image. In the lower right, there is a large, faint circular graphic composed of concentric rings and radial lines, resembling a stylized cyclone or a fan.

CAPRAL

Cyclonic Solutions

CAPRAL

Cyclonic Solutions

Not all windows and doors perform equally. Cyclonic conditions demand specialised products tested and proven to withstand some of the highest pressure, impact and water performance requirements. With over 70 years experience in designing and supplying products for Australian conditions, Capral continues its significant investment in research and development with a committed team of professionals in its Technology Solutions Group who use NATA accredited testing facilities to support our range of cyclonically rated products. So, for your next project, call Capral to discuss your requirements with an industry professional.

Tested product	SLS	ULS+	ULS-	Water	Impact*	WERS*	Acoustic*
Sliding Door - 900 Series	4.5kPa	10.5kPa	10.5kPa	700Pa	✓	✓	✓
Sliding Window - 950 Series	6.0kPa	10.0kPa	9kPa	600Pa	✓	✓	✓
Anwing Window - Euro/419	4.5kPa	10.5kPa	12.5kPa	1200Pa	✓	✓	✓
Fixed Light 419 Series	5.7kPa	10.0kPa	12.5kPa	1200Pa	✓	✓	✓

* Structural members and glass types used in respective testing may vary, please confirm exact specifications with your local Capral representative.

Technical Support

Capral products are backed by a highly experienced design and engineering team and comprehensive technical documentation and support.

Due to the specialised nature of cyclonic applications, Capral's technical specifications should be interpreted by a suitably qualified person or alternatively, specific requirement should be referred to Capral for verification of product suitability.

Subject to application and approval, Capral is also able to custom design and test products for project specific solutions.
