

Environment

At Capral Aluminium we care for the environment. We are committed to the efficient use of resources and the reduction and prevention of pollution and emissions. We believe that all environmental incidents and harm are preventable. We recognise that any part of our activities, products or services may impact on the environment and, as a responsible corporate citizen will work toward sustainable development, which embodies life cycle thinking into its operations. In line with this commitment, we will effectively manage our waste materials using hierarchy of reduce / reuse / recycle and any disposal will be to appropriate environmental standards.

Capral is committed to maintaining an Environment Management System that incorporates Company requirements for planning, implementation and review, based on a risk management approach. Capral acknowledges the importance of the impact of our operations on all major stakeholders by providing information, as appropriate, to employees, shareholders, government agencies and local communities.

Capral is committed to minimising adverse consequences of new plant, equipment and processes by assessing implications in the design, purchase and commissioning phases, ensuring prevention measures are taken prior to operation. Capral will act in an environmentally responsible manner and will rehabilitate environmental damage in a timely and responsible manner.

As an employee of Capral, you have an obligation to take all reasonable care and attention when performing your role, and comply with all directions given to ensure that environmental damage does not occur. You must also actively participate in all environmental audits and assessments, corrective actions administrated, or rehabilitation plans you are involved in.

All Managers, Supervisors and Team Leaders must demonstrate sound environmental leadership at all times. As leaders, you must communicate clear environmental accountabilities and expectations to your teams and review and re-enforce those standards in the workplace.
