

## PRODUCT BULLETIN No. 225

### Euro Bracket Upgrade

Commercial - Residential

An element of 315483 – Euro Rail Fixing Bracket has been upgraded. To help performance and provide extra strength in the 215 & 225 Hinged Doors. The details are as follows

315483  
EURO RAIL FIXING BRACKET  
PACK 4 - ALUMINIUM  
(SPD03068)

The serrated Stainless Steel plate as shown below has had two slight modifications,  
1/ The serrations along the side of the plate have been made more savage and full length.  
2/ A small stiffening element has been added to one end of the plate.

**Existing Plate**

**Upgraded Plate**

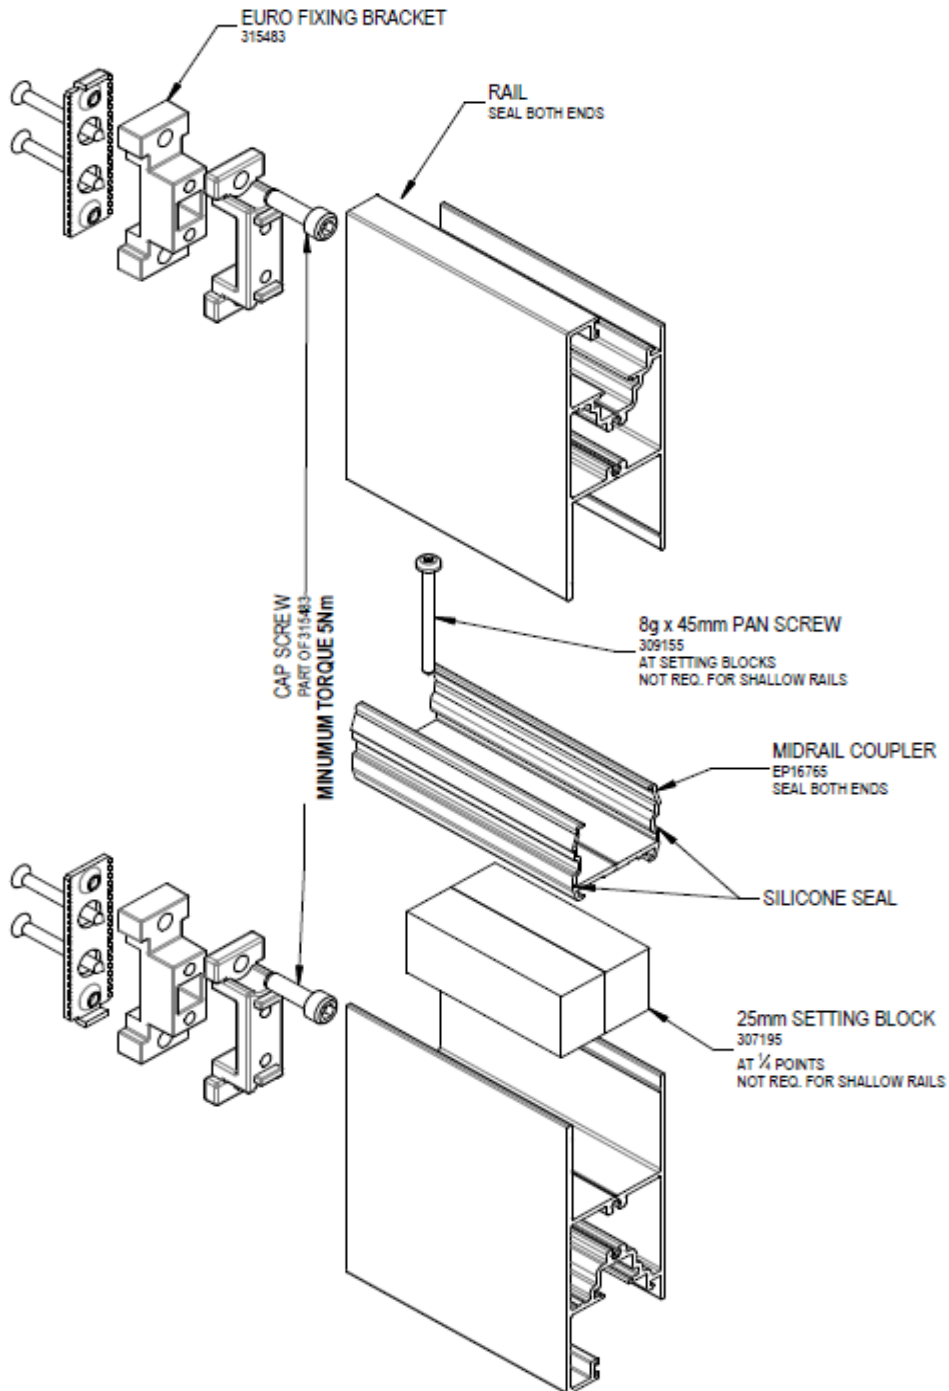

The small stiffening element can face inwards towards the glass or outward towards the outside of the panel except when using the Shallow rail (EP14962 & EP14963) where it must face towards the glass.

This is a running change to the component therefore fabricators will simply see a change to the plates supplied with the packs; these pack can be identified by the colour change in the centre support block to a WHITE colour.

There are no changes to be made to part numbers.

The Assembly guide will be as below:

Note ~ midrail detailed showed though top and bottom rail fabrication is identical.

Stock is now all transitioned to the updated version.

Technical manuals will be updated to reflex the above drawing detail in the next releases

Any questions please contact your local Capral representative

Kind regards,

**Matthew Finnie**
