

PRODUCT BULLETIN No. 195

Urban Plus 597 SS Custom Hinge

Residential - Commercial

Capral is pleased to introduce a new hinge that has been manufactured with 'custom' screw hole locations to function on the Frame and Hinge Stile of the Urban Plus 597 Hinged Door. Being designed to suit the Urban Plus range, makes this exclusive to Capral and has been priced very competitively

Material Number: 320167

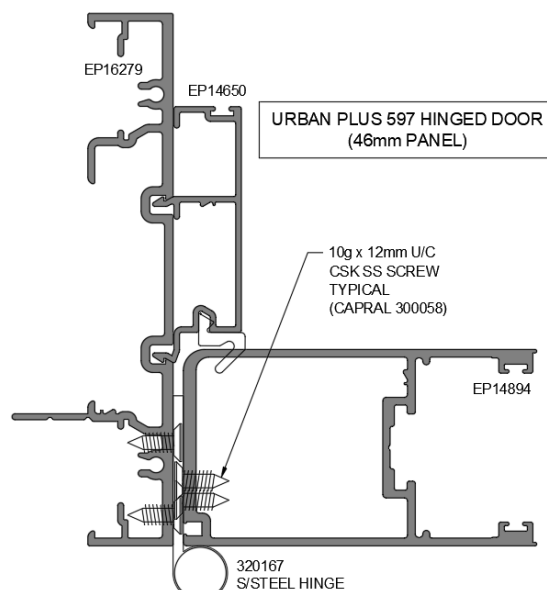

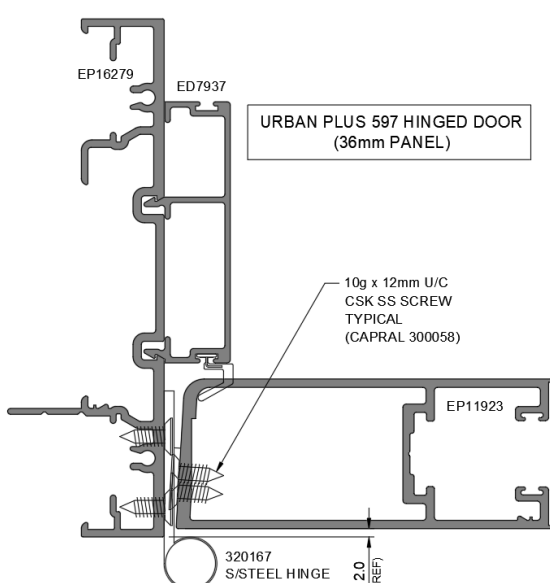

Description: Urban Plus SS Hinge Pair

UOM: Pair

Stocking Locations: Erskine Park & Campbellfield

Maximum Panel Weight:

- 3 Hinges = 60Kg
- 4 Hinges = 80Kg

Commercial Business Unit – 225 & 215 Panels into Framing Systems

In addition to the Urban Plus 597 Hinged Door, the new Stainless Steel Hinge will also be documented in the AGS 225 / 215 Series Door panel system. An assessment has been carried out on various frame types with the following results / considerations;

- 300 & 325 systems: Screw locations clear all webs / screw flutes on the Frame Jamb.
- 400, 425, 450, 600, 625 419 DG systems: The hinge will function on these system however one of the Frame Jamb screws will pass through a web / screw flute. Therefore a sequence should be established when securing the hinge to apply the screw fixing (that passes through the web / screw flute) last to prevent the hinge moving.

419 SG systems: The hinge will function on this system however both Frame Jamb screws will pass through a web which may make the installation difficult. The hinge will need to be secured / clamped in position prior to pre-drilling and applying the Frame Jamb screws

Technical Notes

Technical Manuals and Software systems will be updated in the near future.

Please contact your local Capral representative for further information.

Kind regards

Matthew Finnie
