Amplimesh One Frame Product Release

Security Products

Amplimesh One Frame (EP17516)

As a result of undertaking one of our largest R&D Security projects, today we are proud to release the Amplimesh One Frame.

Sleek in appearance, the heavy-duty Security Door Frame is exclusive to the Amplimesh Dealer Network and capable of making three of the most popular Security infill products in the Australian marketplace.

It removes the unnecessary need to have different frames for different infills, assisting our fabricator base to reclaim factory space and have a more aggressive market offer, both in colour and turn-around time. It also has simplified fabrication techniques along with been fully tested to AS5039-2008.

- Amplimesh One Frame can be used to make the following products:
 - **Privacy Plus** – An Aluminium restricted vision guard / panel.
 - **IntrudaGuard** – An Aluminium perforated screen with class leading visibility
 - **SupaScreen** – 316 High-tensile Stainless Steel woven mesh

To assist the introduction of the One Frame we have prepared,

- An assembly Guide for fabrication reference
- A colour reference chart – Showing new codes and finishes for ordering
- A video for SupaScreen assembly showing assembly differences to ED8706 frame.
- Extrusion length has been increased to 6.3mts
- No increase to cost per meter from ED8706 frame

Please contact your local Capral representative for further information.

Regards,

Jack Ryan
