

PRODUCT BULLETIN No. 241

Window FlyScreen Frame Curvature (ED7677 & ED7678)

Fly Screens

As a response to Capral customer and fabricator feedback we will be making a rolling modification to our Window Fly Screen Frame. The curvature (also known as 'bow') of the window fly screen frame will be reduced from an 80° to a 60° curvature. This adjustment will improve and assist the cutting / clamping of the fly frame and be more fabricator friendly to assemble.

No order item code changes are required and stock with the adjusted curvature is due to arrive in August.

25 x 11 Extruded Fly Frame

Section ED7677

Alloy 6060

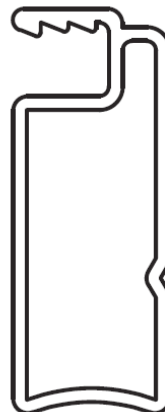

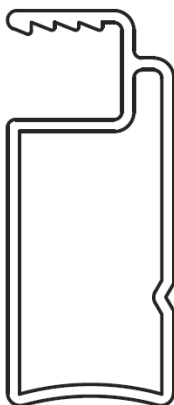

Temper T5

22 x 9 Extruded Fly Frame

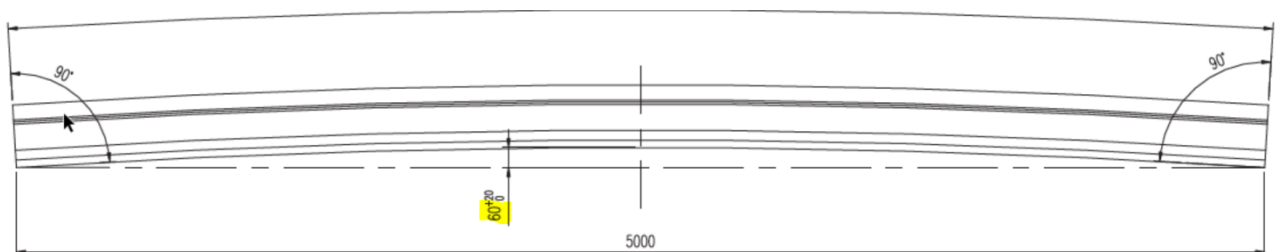

Section ED7678

Alloy 6060

Temper T5

Example of curvature across a full length:
