

The Architectural Series

Light is the principal beauty in building
Capral Aluminium understands this

This document contains Capral's proprietary information and must not be copied or used without Capral's written permission. The information is intended as a guide only and you should consult a suitably qualified person for their application to the particular circumstances. Responsibility for code compliance remains with the user. Capral takes no responsibility for any loss or damage whatsoever arising from errors contained in this document.

Capral are proud to be experts in creating glazing solutions for the building industry. We don't merely design windows but strive to create products that integrate into the building design. We provide solutions to problems. Our products blend seamlessly into the aesthetic of any project and we focus not only on cost but the value that Capral and our products add to any project.

The Capral Architectural Series pulls together systems from the comprehensive Capral product range to provide inspiration and choice for the future of architectural design.

CAPRAL

ALUMINIUM

You will find our selection of door, window and framing systems offer a great range of functionality such as projection, sliding and folding options, and also meet the demands of different architectural styles – be they single or multi-story projects.

Each system in the collection has a dedicated page that discusses its features, benefits and specifications. From energy and structural performance through to acoustic and glazing capabilities, you will find all the crucial information to make an educated specification decision.

Every product in the Capral Architectural Series has a story behind it – read on to find out more.

Who is Capral Aluminium and what do we offer?

Established in 1936, Capral Aluminium is Australia's largest manufacturer and distributor of aluminium products. We also design and extrude aluminium window and door systems with an enviable reputation for quality, style and performance.

Capral Aluminium is proud to offer an extensive range of systems made in Australia, designed and tested to fulfil every need of today's modern living requirements. Our window and door systems allow light, space and thermal comfort to be at the forefront of every building's design.

In addition to a standard range of aluminium window and doors traditionally available to the Australian market, Capral has developed a high performance range of architectural glazing systems to cater for contemporary trends whilst providing sustainable, energy efficient facade solutions.

Capral Aluminium Heritage

Capral Aluminium has been investing in the Australian industry and Australian jobs since 1936.

We understand the Australian market and its environmental conditions and this has made us Australia's leading designer, extruder and distributor of window and door systems.

R&D and Product Testing

Capral Aluminium maintains an in-house team of designers and engineers that represents one of the most experienced product development groups in the industry. This capability combined with our NATA accredited test facilities means Capral window and door systems are subjected to rigorous testing to ensure they meet and exceed structural, weather and operational performance requirements.

Manufacturing Footprint

Capral Aluminium's manufacturing footprint includes the largest extrusion facility in the Southern Hemisphere at our Bundamba operation in Queensland. Extrusion manufacturing facilities are also located in Victoria, New South Wales, South Australia and Western Australia, supplying world class products at short lead times.

Distribution Network

Our extensive metropolitan and regional distribution network services a wide range of industries including residential and commercial construction, transport, marine and general engineering. Regional distribution centres support a network of conveniently located trade centres.

Australian Supply Chain

As a local manufacturer, we are required to meet Australian environmental regulations and standards in manufacturing and finishing operations. Understanding the full life cycle impact of products means Capral's manufacturing processes and materials can be traced back to their source.

Fabrication Partners

Capral Aluminium supplies a network of independently owned fabricators with extensive experience in the fabrication and installation of Capral window and door systems. These fabricators operate in both metropolitan and regional locations throughout Australia.

A sustainable solution for contemporary living

Capral is committed to developing products that deliver positive environmental outcomes. The many facets of our operations help us achieve this goal:

Aluminium – The Super Metal

Aluminium boasts one of the highest recycling rates of any metal. At the end of their long life, Capral aluminium window and door extrusions can be readily recycled.

Coatings and Finishes

Capral uses and recommends Interpon powder coatings containing no organic solvents or heavy metal pigments such as lead.

Energy Efficient Window and Door Systems

During their ‘use phase’, high performance aluminium window and door systems can deliver significant reductions in energy required for heating and cooling. The energy saved by using high performance window and door systems can be many hundreds of times greater than that consumed to produce the original aluminium extrusions.

Australian Supply Chain

As a local manufacturer, Capral is required to meet Australian environmental regulations and standards in its manufacturing and finishing operations. Understanding the full life cycle impact of products requires manufacturing processes and materials to be traced back to their source. When materials are sourced from overseas, it can be difficult to know whether they have been produced in an environmentally responsible way.

National Manufacturing Footprint

Capral’s national manufacturing footprint allows our extrusions to be produced close to where they are required. This helps avoid unnecessary sea and road freighting, reducing carbon dioxide emissions.

Capral Architectural Doors

Doors in the Capral Architectural Series have been selected to epitomise some very specific key criteria – compatibility, value, strength and reliability.

Compatibility not only with the building interface but also with other Capral glazing systems. Glazed doors should be an integrated access solution, not just a door.

Value is represented by getting the maximum return on your investment – you will always be satisfied with Capral value.

Strength offers flexibility and opens up possibilities. We don't want to limit your imagination, so our doors can offer panel sizes and configurations to offer a high degree of design flexibility.

Reliability is not only designed into our products but ingrained in our design philosophy. Our reputation is built on our product quality and we test all our products for the harshest conditions with hardware we trust.

So whether you want a hinged or pivoting entry door, a sliding door to a patio or a folding door out to an entertainer's deck, you can be sure these Capral products offer the qualities that you are looking for.

Architectural Doors
AGS 900 Series Sliding and Cavity Door

The cutting edge AGS 900 Series Sliding and Cavity Door represents the latest generation of commercial door development.

Specifically designed to deliver unrivalled performance and design flexibility, the AGS 900 Series Sliding and Cavity Door is capable of panel sizes up to 3000mm in height and 2500mm in width, with multi-stack configurations available. This product has been fully tested to meet cyclonic requirements. Incorporating high quality hardware including heavy duty double wheel rollers and various locking options, the AGS 900 Series Sliding and Cavity Door is proving extremely popular on many landmark commercial projects including Waterfront at Newstead Brisbane, Fairlanes Apartments Perth and Edens Apartments Melbourne.

For enhanced thermal comfort and performance, double glazing is possible incorporating insulated glass units up to 26mm in thickness.

CAVITY OPTIONS

FEATURES AND BENEFITS:

- Ultra high performance design
- Suited to almost any commercial or architectural application
- Extended product limitations for large configurations
- Tested to cyclonic requirements
- High performance roller hardware
- Standard and multi-stack configurations of up to 6 panels
- May be internally or externally screened

Architectural Doors

AGS 215 Series Door

The AGS 215 Door is a 36mm pocket glazed hinged door panel designed to meet the market demand for a cost effective hinge door while still having the key attributes of a commercial hinged door. This makes it ideal for semi-architectural and light commercial projects such as domestic entry doors, internal applications or lower traffic use where the installation of a full commercial door would be excessive.

The AGS 215 Door is also compatible with a vast range of commercial and architectural locks and furniture as well as the full range of Capral framing systems.

FEATURES AND BENEFITS:

- 36mm door panel
- Suits both single and double glazing
- Hinged, french and entry door configurations
- Suits light-commercial and semi-architectural applications
- Compatible with a wide range of framing suites
- Open in and open out configurations

Architectural Doors

AGS 225 Series Door

The AGS 225 Door is a 46mm pocket glazed commercial door panel capable of hinge, pivot and sliding door configurations and has been designed with flexibility, performance and ease of assembly in mind. The AGS 225 Door builds on the trusted and reliable 200 and 275 Series Doors, suiting a wide range of applications from architectural entry doors through to commercial shopfronts.

The AGS 225 Door can be fitted with either single or double glazed units and has the option of standard and wide stiles. It is also compatible with a vast range of commercial and architectural locks and furniture as well as the full range of Capral framing systems.

FEATURES AND BENEFITS:

- 46mm Door Panel
- Narrow and wide stile options accommodate a wide range of hardware
- Shallow rail option
- Suits both single and double glazing
- Hinged, french, pivot and sliding door panel configurations
- Suits commercial or architectural applications
- Compatible with a wide range of framing suites

Futureline Lift and Slide Doors offer the ultimate in quality and performance effectively being walls of glass that can slide effortlessly using a single hand. The Futureline Lift and Slide is a stunning example of its kind, utilising the same outstanding thermal break technology and crisp and clean lines as the Futureline Sliding Door and Window.

By having the same frame and sash as the Futureline Sliding Door and Window, the Lift and Slide blends seamlessly with the rest of the Futureline range. Its special hardware, that enables the lift and slide functionality, is a high end European system meaning that the quality and durability of the product is difficult to match.

The Lift and Slide has a 45mm deep sash, midrail option and supports multiple configurations. The handle design completes the door by providing an architectural finish.

Architectural Doors

Futureline Hinged Door

The Futureline Hinged Door system integrates seamlessly into the Futureline framing system to provide a high quality, thermally broken hinged door option.

The 46mm door panel has been designed with clean, flat faces and a choice of standard or tall door rail options for added design flexibility. Midrails are also available to create a segmented look or to align with adjacent transoms.

High quality hardware is featured throughout including heavy duty corner spigots, hinges and optional multi-point locks.

The door panel profiles incorporate a pair of wide thermal spacers to minimise heat transfer while a selection of glazing bead options accommodate double glazing up to a width of 32mm.

FEATURES AND BENEFITS:

- Outstanding 'Uw' values down to 2.5
- Industry standard 46mm door panel profile
- Two rail and midrail (standard and tall) options
- Spigot corner joints
- Crisp, clean square profiles
- Capable of accommodating IGU's up to 32mm
- High quality hardware

Capral Architectural Windows

Windows have traditionally been a simple method of introducing natural ventilation and light into a room. You will find there is something a bit more special about the window systems in the Capral Architectural Series.

Awning and casement windows are chosen for the volume of airflow that can pass through them as the entire window opens. Capral awning and casement windows take this a step further because of their ability to have extra large openings and are compatible across all Capral frame types.

Capral sliding windows are built “pretty tough”. They’re not only pleasing on the eye but rugged enough to withstand the rigours of daily use and the environment your project.

The Euro Tilt & Turn introduces technology to Australia that has long been common in Europe. As the name suggests, the Euro provides two functions – ventilation (tilt) and cleaning access (turn).

And every window system in the Architectural Series can be extremely safe with Capral’s very own SupaScreen or SupaSafe stainless steel window screens.

Architectural Windows
AGS Euro Awning/Casement Window

The luxury is obvious in the AGS Euro Awning/Casement window. With the option of a casement window to allow for maximum exposure from the outside, or a top hung awning window, the AGS Euro Awning/Casement is perfect for almost any application.

FEATURES AND BENEFITS:

- Single and Double Glazed options (up to 27mm)
- European designed components and hardware to improve functionality and adjustability
- Multiple and adjustable locking points allow large sizes and high wind pressures
- Option for screening system integrated into frame

Architectural Windows
AGS 50 Series Awning/Casement Window

The AGS 50 Series Awning/Casement Window is a high performance commercial operable window system capable of incorporating fixed lights and operable awning, casement or pivot sashes.

This product may be fabricated in a number of configurations allowing for a wide variety of applications.

For enhanced thermal comfort and performance, double glazing is available supporting insulated glass units up to 25mm thick.

FEATURES AND BENEFITS:

- Range of framing options
- Single and double glazing options
- Incorporates rain-screen design principles for improved performance
- High degree of design flexibility
- Compatible with a range of Capral suites

Architectural Windows
Futureline Awning/Casement Window

Designed to complement the excellent thermal performance of the Futureline thermal break framing system, the Futureline Awning and Casement window system offers a stylish and functional operable window option.

The 54mm sash profile incorporates a pair of high performance polyamide strips to efficiently minimise heat transfer, while internal and external weather seals combined with an overlapping frame design offer a high level of weather-tightness.

The Futureline Awning and Casement window features the option of fully integrated screening and the flexibility of either sash handles or sash operator options. Robust sash construction and corner strength is assured with the use of high quality European corner clamping components.

FEATURES AND BENEFITS:

- Outstanding 'Uw' values down to 2.7
- 54mm heavy duty sash profile
- Double weather seals
- Capable of accommodating IGU's up to 40mm
- Mitred corner construction with high quality hardware
- Compatible with Futureline 440TB & 419TB Framing Systems.

Architectural Windows

AGS 950 Series Sliding Window

The AGS 950 Series Sliding Window system has been developed as a complimentary product to the AGS 900 Series Sliding Door, both providing excellent structural performance. Engineered to deliver high strength, this window has been tested to cyclonic requirements and is capable of large sash sizes and numerous configurations.

Incorporating heavy duty roller hardware, twin point locking and integrated insect screening, the AGS 950 Series Sliding Window is ideally suited to applications where clean, modern aesthetics, high quality functionality and a range of performance options are demanded. Double glazing is also available for improved thermal comfort and performance.

FEATURES INCLUDE:

- Ultra high performance design
- Tested to cyclonic requirements
- High performance roller and locking hardware
- Compatible with a range of Capral suites
- Extended product limitations for large configurations
- Slider over slider and slide-slide option

Architectural Windows
AGS 480 Series Sliding Window

The AGS 480 Series Sliding Window incorporates the features and flexibility of a residential window system into the commercial grade AGS 400 Series Narrowline Framing System.

The AGS 480 Series Sliding Window is particularly suited to architectural applications where a more substantial, commercial appearance is desired. This window delivers a neat and streamlined appearance with squared mullion and glazing bead.

With the use of adaptors, it can also be double glazed to offer an enhanced level of thermal comfort and performance and delivers sliding sash functionality in a modern and bold external framing system.

FEATURES AND BENEFITS:

- Bold 101.6mm outer frame
- Single and double glazed options
- Slider-over-slider functionality
- Integrated head and sill design for neat, clean appearance
- Adjustable rollers and height adjustable lockable latching option
- Integrated insect and security screening options
- Compatible with a range of Capral suites

Architectural Windows

Futureline Sliding Window

Utilising the latest in European thermal break technology, the Futureline Sliding Door and Window have been designed to compliment the rest of the Futureline range with outstanding energy ratings, crisp and clean lines, and high quality hardware.

Utilising the same frame and sash, the Sliding Window only differs in the operational hardware, making a very versatile and adaptable system. Along with the outer frame, the 45mm deep sash has been designed with energy performance in mind by utilising a combination of both multi-hollow and double bar polyamide strips.

The handle design completes the door by providing an architectural finish that will look the part in any project.

FEATURES AND BENEFITS:

- Outstanding 'Uw' values down to 2.6
- Industry standard 100mm frame with strong 45mm deep panels
- 102mm sash 'face' gives a strong architectural aesthetic with an 84mm midrail available as an option
- Mitred frame and sash corner construction with high quality hardware
- Fixed-Slide (OX), Slide-Slide (XX) and Fixed-Slide-Slide-Fixed (OXXO) configurations with stacking option available on request

Architectural Windows
AGS Euro Tilt and Turn Window

When functionality counts – providing both ventilation and ease of access for cleaning, AGS Euro Tilt & Turn technology provides an ideal solution for a common problem.

Opening to the inside, the AGS Euro Tilt & Turn hinges from the bottom for ventilation and from the side (like an internal casement) for cleaning access. Access for cleaning can be locked to prevent unauthorised opening which is ideal in a multi-story apartment or hotel complex.

The Euro’s multi-point locking provides excellent structural performance allowing its use in high wind cyclonic areas.

FEATURES AND BENEFITS:

- Single and Double Glazed Options (up to 27mm)
- Standard and high performance configurations using sub frame system
- European designed components and hardware to improve functionality and adjustability
- Multiple and adjustable locking points
- Option for screening system integrated into frame
- Inward opening allows for ease of cleaning

Amplimesh Security Screens

Combining looks and practicality, improving the liveability of small and large spaces with the ability to cross flow ventilate, Amplimesh® Security Screens are icons in the Australian security and home safety market for commercial and residential projects.

Over the last fifty years, more than two million Australians have trusted Amplimesh® to secure their homes and apartments with innovative products.

FEATURES AND BENEFITS:

- A woven wire security screen with the translucent appearance of a flyscreen constructed with high-tensile 316 marine grade stainless steel
- Multiple configurations and lifestyle options for alfresco areas
- Australian Security Standard compliant with a finer high-tensile mesh for a clearer view
- Unique safety options such as escape and fall prevention screens
- No internal visible security fixings – giving a designer look and feel
- No screws/clamps penetrating through the face of the Stainless Steel mesh ensuring long lifespan
- One dual purpose PVC ‘wrap around’ pressure fit co-extrusion for mesh retention and the ultimate protection from dissimilar metal galvanic corrosion
- WERS rated on generic industry typical aluminium residential and commercial windows for building energy efficiency
- Access to glass for ease of cleaning

IntrudaGuard Security Screens

Protection without obscuring your view. IntrudaGuard's® perforated aluminium screen boasts a class-topping 125° viewing angle making it suitable for windows and door. Designed and tested to withstand a wide range of impact-based attacks and with an all Aluminium framing system, IntrudaGuard® prevents any galvanic corrosion from occurring and increases the life of your screen.

FEATURES AND BENEFITS:

- Durable and corrosion-resistant, the IntrudaGuard® shield is made from a single sheet of specially tempered marine grade aluminium with a distinctive perforated design making it not only corrosion resistant but easy to maintain
- Australia's First Perforated Aluminium Security Screen boasting a class-topping 119° viewing angle
- Assembled using a revolutionary bonding process eliminating the need for any unsightly fixings to secure the mesh
- Suitable as a Fall Prevention Screen option
- IntrudaGuard® Security Screens are rigorously tested to meet Australian standards. They are strong, practical and affordable
- WERS rated on generic industry typical aluminium residential and commercial windows for building energy efficiency

Capral Framing Systems

Framing systems are the foundation behind panoramic views, natural light, wide or tall expanses of glass, integration of doors and windows, and a myriad of glass options for energy or aesthetic requirements. Capral framing systems have one thing in common – they can do it all.

From the centre glazed 400 Narrowline to the front glazed 419 Flushline, the selected framing systems in the Capral Architectural Series offer maximum flexibility and performance in your project.

And if your project is after that something even a little bit more special, our Curtain Wall systems are ideal for feature or strip walls.

If one of the selected framing systems in the Capral Apartment Collection isn't quite what you require, why not talk to us further as we have a range of other framing systems including larger, smaller or sound proofing options.

Framing Systems

AGS 400 & 425 Narrowline Framing Systems

The AGS 400 & 425 Narrowline framing systems have set the standard for centre glazed framing for over two decades. With an aesthetically balanced look, the AGS 400 & 425 Narrowline are amongst the most versatile and adaptable framing systems in the range.

With a multitude of compatible window and door suites, the AGS 400 & 425 Narrowline framing systems offer enormous design flexibility making these products ideal for commercial or residential projects that require a bold modern look and high levels of structural performance.

- FEATURES AND BENEFITS:**
- Centre glazed framing system - AGS 400 = 101.6mm x 44mm and AGS 425 = 101.6mm x 50mm
 - Suits most commercial or architectural applications
 - AGS 400 supports single glazing
 - AGS 425 supports double and single glazing
 - Crisp, narrow unbroken lines for clean aesthetics
 - Captive glazing wedge options for easier on-site glazing
 - Flexible design with a range of mullion and transom options
 - A wide range of compatible AGS window and door suites

Framing Systems

450 Narrowline Wide DG Framing System

The AGS 450 Narrowline has been designed with extra wide glazing pockets to accept double glazed units with internal venetian blinds commonly used in health projects, extra thick glazing specified due to impact requirements or triple glazing for increased energy efficiency requirements.

Accepting glazing up to an amazing 44mm wide or down to a standard 12mm with the addition of inlay beads, the AGS 450 Narrowline offers great flexibility if necessary.

FEATURES AND BENEFITS:

- Dedicated wide pocket double glazed 101.6mm x 55mm centre glazed frame
- Glazing pocket accepts 31 to 44mm glass or 12 to 31mm using inlay beads
- Ideal for health projects where double glazed venetians have been specified
- Suits most commercial or architectural applications requiring improved thermal characteristics
- Crisp, narrow unbroken lines for clean aesthetics
- Captive glazing wedge options for easier on-site glazing

Framing Systems

AGS 419 Flushline Framing System

The AGS 419 Flushline is a flush glazed framing system offering a clean and modern external appearance. With a range of frame depths including 100mm, 150mm and 250mm this suite offers the ultimate in design flexibility allowing the system to be scaled to the requirements of each project.

A uniform external appearance also allows various frame widths to be used whilst maintaining a consistent look. In addition to these features, the AGS 419 Flushline Framing System can incorporate structurally glazed mullion profiles and offers a number of operable door and window options.

FEATURES AND BENEFITS:

- Suits most commercial or architectural applications
- Forward positioned glazing pocket for flush external finish
- Structurally glazed mullion and transom options
- A wide range of compatible Capral AGS window and door suites available
- Double glazed and thick glass options are also available in the 419 Flushline Double Glazed framing system

Framing Systems

Futureline 440TB Framing System

The Capral Futureline thermally broken framing system is modelled on the same simplicity and versatility which has long been a hallmark of Capral commercial framing systems. It incorporates the glazing capacity to accommodate high performance double glazed units while retaining the crisp, clean profiles typically associated with commercial glazing systems.

The use of the latest thermal break technologies including single bar multi-hollow and double bar polyamide strips have all been incorporated into the Futureline framing system to deliver excellent levels of thermal insulation.

The Capral Futureline framing system offers the best of both worlds; a strong architectural aesthetic with a level of thermal efficiency usually associated with narrower, less substantial framing systems.

FEATURES AND BENEFITS:

- Outstanding 'Uw' values down to 1.7
- 100mm x 62mm Centre Glazed Framing System
- Crisp, clean square profiles
- Capable of accommodating IGU's up to 34mm
- Thermally broken Sub Frames
- High Performance Glazing Bead System
- Made from Ecometal™
- Trickle Vent
- Compatible with Futureline Awning and Casement Window, Hinged Door, Sliding Window, Sliding Door and Lift & Slide Door Systems

Framing Systems

Futureline 419TB Framing System

The Futureline 419TB framing system incorporates the glazing capacity to accommodate high performance double glazed units while retaining the crisp, clean profiles typically associated with commercial glazing systems.

The use of the latest thermal break technologies including multi-hollow and double bar polyamide strips will deliver excellent levels of thermal insulation. Mullions and transoms have been designed to accommodate common modular construction methods, allowing it to be fabricated in a similar manner to non-thermally broken framing systems.

The Capral Futureline 419TB framing system offers the best of both worlds; a strong architectural aesthetic with a level of thermal efficiency usually associated with narrower, less substantial framing systems.

FEATURES AND BENEFITS:

- Outstanding 'Uw' values down to 1.9
- 150mm x 62mm Front Glazed Framing System
- Modular frame construction
- Thermally broken sub frames
- Capable of accommodating IGU's up to 34mm
- Made from Ecometal™
- Trickle Vent
- Compatible with Futureline Hinged Door, and Awning and Casement Window Systems

Framing Systems

AGS CW175 Curtain Wall Framing System

The AGS CW175 Curtain Wall Framing System has been developed to provide a robust and flexible curtain wall solution for small to mid-sized projects. While targeted at buildings up to a nominal 10 stories high, due to its superior design, it may be used on larger projects depending upon wind loads.

Among the many technical innovations and enhancements is its 4-sided structurally glazed design. This allows it to be configured in a flush, semi-frameless style or configured so that some or all of the aluminium profiles are visible from the outside.

The AGS CW175 Curtain Wall has met the strict AS4284 testing regime and the co-development of building and mullion brackets allow it to be installed as a fully tested integrated system without the need to engineer brackets and fixings separately.

Another key feature is the integration of sun shading directly into the Curtain Wall system without sacrificing structural or water performance. Proprietary brackets have been designed to allow the fitment of vertical or horizontal sunshades directly on the mullions for superior solar control.

FEATURES AND BENEFITS:

- 175mm x 80mm frame
- 4-sided structural glazing offers maximum aesthetic flexibility
- Double glazed as standard with the ability to easily incorporate single glazed spandrel panels
- Can incorporate proprietary sun shade brackets integrated into the frame without sacrificing structural or water performance
- Proprietary building brackets provide for a fully tested system
- 90° Corner mullions and sun shade brackets available

Framing Systems

AGS CW150 Curtain Wall Framing System

The AGS CW150 Curtain Wall Framing System has been developed to provide a robust and flexible Curtain Wall solution for small to mid-sized curtain wall projects. While targeted at buildings up to a nominal 10 stories high, due to its superior design it may be used on larger projects depending upon wind loads.

A feature of this product is the strict AS4284 testing regime and the co-development of building and mullion brackets allowing it to be installed as a fully tested system without having to independently engineer brackets for each project.

Another key feature is the integration of sun shading directly into the Curtain Wall system without sacrificing structural or water performance. Proprietary brackets have been designed to allow the fitment of vertical or horizontal sunshade directly on the mullions (not compatible with structural mullions).

Being based upon the AGS 419 Flushline Framing System, it also offers compatibility with a broad range of operable products in the AGS family.

FEATURES AND BENEFITS:

- 150mm x 75mm frame
- Forward positioned glazing pocket gives a clean and modern external appearance
- Double glazed as standard with single glazed and spandrel options using inlay beads
- Structurally glazed vertical mullions available
- Can incorporate proprietary sun shade brackets integrated into the frame without sacrificing structural or water performance
- Proprietary building brackets provide for a fully tested system
- Compatible with 419 150mm DG framing system providing a consistent look across your project
- Designed and tested as a wet glazed panellised system to AS4284. If AS2047 is specified, may be installed dry-glazed and non-panellised
